EXPERIENCE

Olympus Europe SE & Co. KG

Quality Engineer – European Technical Service Center

May 2025 – February 2026, Hamburg, Germany

- Managed CAPAs and non-conformities end-to-end by driving root cause analysis, defining corrective and preventive actions, and ensuring alignment with ISO 13485 and MDR quality system requirements.
- Collaborated with field engineers, laboratory teams, and product managers to identify recurring issues early and implement preventive measures that improved service quality and reduced repeat deviations.
- Streamlined quality documentation and reporting in SAP and internal systems, accelerating case closure times while maintaining full traceability for audits and regulatory inspections.
- Developed an internal AI-powered FDA 510(k) analysis tool using React that parses regulatory documents and extracts structured information (device class, CFR, product codes, referenced standards, risk levels, compliance gaps and QA recommendations), helping quality and regulatory teams benchmark QMS requirements and FDA expectations more efficiently.

Olympus Europe SE & Co. KG

Service Engineer – Technical Service Product Management

May 2024 – May 2025, Hamburg, Germany

- Updated and continuously optimized spare parts lists and data modification notices (DMNs) for field service teams, improving spare-parts accuracy and reducing delays during medical device maintenance.
- Structured and digitized technical sheets, export control documents, and service bulletins in SAP, IBM Notes, and internal archives, which accelerated information retrieval and reduced documentation errors.
- Supported product lifecycle management by setting up and revising spare parts and coordinating service documentation, helping to minimize device downtime and improve overall service efficiency.

Olympus Europe SE & Co. KG

Junior Support Engineer – 2nd Level SI Support

May 2023 – May 2024, Hamburg, Germany

- Optimized training equipment inventory across warehouses and laboratories by restructuring storage layouts, improving device availability, and reducing setup time for hands-on sessions.
- Built and tested new product setups in the lab, including wiring, configuration, inventory verification, and functional validation of biomedical devices to support safe and reliable field use.
- Developed and enhanced the internal device knowledge database using HTML, CSS, and JavaScript to enable faster device search, improve complaint handling workflows, and centralize technical and service information for support teams.

Orbus Healthcare

Medical Systems Consultant – Orbus Consulting

May 2022 – December 2022, Hamburg, Germany

- Supported doctors and clinical staff with in-depth product training and troubleshooting so devices were used safely and effectively in daily practice.
- Collected feedback from hospitals and clinics, summarized recurring issues and passed them to product and quality teams to guide improvements.
- Regularly presented product updates and competitive insights so customers and internal stakeholders understood the technical and clinical value of our solutions.

SKILLS

Quality and Regulatory Compliance

QMS - ISO 13485 - EU MDR - US FDA (21 CFR 820) - IEC 60601 - CAPA Management - NC Investigation - SOP Development

Software Development & Data Analysis

JavaScript (React) - Python - HTML/CSS - MATLAB - C# - PyTorch - TensorFlow - NumPy - Power BI

Engineering and Enterprise Systems

SAP (Quality & Logistics Modules) - AutoCAD - IBM Notes - Jira - Figma - Trello – GitHub

AI & Productivity Tools

Claude AI - OpenAI (GPT) - Perplexity AI - Microsoft Copilot - Microsoft Office Suite

Key Competencies

Root Cause Analysis - Cross-Functional Collaboration - Agile Teamwork - Technical Documentation - Process Optimization

Languages

English: Native proficiency (C2)

German: Professional working proficiency (B2)

PROJECTS

FDA 510(k) Analyzer

<https://github.com/DanielOkeah/fda-analyzer>

AI-powered React web app that parses FDA 510(k) submissions and extracts structured regulatory data (device class, CFR codes, predicate devices, standards, compliance gaps, QA recommendations) to streamline QMS benchmarking and FDA analysis for medtech quality teams.

ECG Arrhythmia Detection with CNN

<https://github.com/DanielOkeah/ecg-arrhythmia-cnn>

1D CNN classifier trained on MIT-BIH database achieving 99.7% accuracy on 82k ECG beats; includes FastAPI deployment, Docker support, batch prediction endpoints and full evaluation metrics for clinical arrhythmia screening.

Chest X-Ray Pneumonia Detection

<https://github.com/DanielOkeah/ecg-arrhythmia-cnn>

CNN model classifying pneumonia vs normal chest X-rays (93% accuracy, 95% pneumonia recall) using Kaggle dataset; demonstrates clinical-grade image preprocessing, augmentation, model validation and metrics prioritized for radiology triage workflows.

Personal Portfolio Website

<https://danielokeah.netlify.app/>

Responsive portfolio built with HTML, CSS, JavaScript showcasing biomedical engineering projects, regulatory tools and full-stack capabilities for medtech career development.

ECG Signal Denoising & Enhancement

AI-based denoising using convolutional networks and autoencoders to clean ECG signals while preserving diagnostic features; bridges signal processing research with practical medtech signal quality improvement.

EDUCATION

Master of Science in Biomedical Engineering

HAW Hamburg University of Applied Sciences, Hamburg, Germany

March 2023 – Expected September 2027

GPA: 2.38 (German scale)

Bachelor of Science in Biomedical Engineering, Honors

Kharkiv National University of Radio Electronics, Kharkiv, Ukraine

September 2018 – June 2022

GPA: 4.0/4.0
